

Year 4's Class News (Week beg 20th March 2023)

We have enjoyed learning about healthy teeth in science this week. Firstly, we found out about milk teeth and adult teeth and their jobs in our mouths. On Wednesday, we learned about keeping our teeth healthy and brushing teeth regularly. We brought our toothbrushes to school, cleaned our teeth then used a disclosing tablet to observe the areas we had missed. Most of us are very good at brushing our teeth but there were a few areas that were noted to try and clean better. As the Science lead in our school I am so pleased they are so enthusiastic about this subject and am delighted with the progress they are making in their learning. Here are a few photos:

The children are working so hard in all areas of our 'Touch the Future Curriculum' and are taking great pride in their work. They are continuing to learn their times tables and impressed Miss Lennon last week when she visited our class with their knowledge of the 12 times tables! Please continue to encourage your child to go on 'Times Tables Rock Stars' it will really help them to learn their tables and prepare them for the national Y4 Times Tables Check they will be taking in the summer term. I also ask you to continue to read with your child every night and question them on their understanding of what they are reading. It is so important that children make sense of what they are reading, it is not just about reading the words correctly. Thank you for all your support in this area.

I am loving working with your children and am so proud of them all.

I hope you have a great weekend, and look forward to more exciting learning next week,

Kind Regards,

Mrs Neiland.
